Print length : 479 pages

This book provides a comprehensive overview of geospatial analysis and modelling techniques used to study urban structure and dynamics. It covers a wide range of topics, including data acquisition and preprocessing, spatial data analysis, and urban modelling. The book is written in a clear and concise style, and is packed with examples and case studies to illustrate the concepts discussed.

The book is divided into three parts. The first part introduces the basic concepts of geospatial analysis and modelling. The second part covers the different types of data used in urban analysis, and the techniques used to acquire and preprocess these data. The third part covers the different types of urban models, and the techniques used to develop and calibrate these models.

This book is an essential resource for researchers and students in the field of urban planning and management. It is also a valuable resource for professionals who use geospatial analysis and modelling techniques in their work.

Table of Contents

-
- Data Acquisition and Preprocessing
- Spatial Data Analysis
- Urban Modelling
- Case Studies
-

Reviews

"This book is a comprehensive and up-to-date overview of geospatial analysis and modelling techniques used to study urban structure and dynamics. It is written in a clear and concise style, and is packed with examples and case studies to illustrate the concepts discussed. This book is an essential resource for researchers and students in the field of urban planning and management. It is also a valuable resource for professionals who use geospatial analysis and modelling techniques in their work."
