- Cumulus clouds are puffy clouds that look like cotton balls. They are often seen on sunny days.

How to Identify and Photograph Cloud Formations

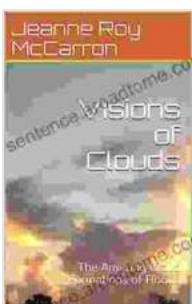

The third section of the book provides information on how to identify and photograph cloud formations. This section includes tips on how to use a camera to capture the beauty of cloud formations.

To identify a cloud formation, you need to look at its shape, texture, and color. The shape of a cloud can tell you what type of cloud it is. The texture of a cloud can tell you how thick it is. The color of a cloud can tell you how high it is.

To photograph a cloud formation, you need to use a camera that has a good zoom lens. You also need to use a tripod to keep your camera steady. The best time to photograph cloud formations is during sunrise or sunset. This is when the clouds are most colorful.
